

Colophon

Web Standards

I have made my page to validate with XHTML 1.0 Transitional and CSS 2.1.

Usability

I have made my website to have a simple navigation scheme. The page names match the links created for minimum confusion. I have also set my side navigation bar to a absolute position so that the user can find other links to other parts of my website that are not in my navigation bar. I have also placed a few links to other websites that are my favorite places to go.

Software

The software that I used to make this website was Netbeans IDE 6.8 and Firezilla. My host that I used was Host Monster.
